Adopting a Substance-Exposed Child

As you approach adoption, there are several steps you can take to learn more about these exposures, and separate fact from myth.

Originally, it was believed that younger children could overcome the exposure without any long term effects, however families are experiencing residual issues, including:

- ADD/ADHD
- learning weaknesses
- sensory integration issues

These aren’t new disorders, they’ve simply been identified now.

Many encounter problems trying to differentiate between premie development and the effects of the drugs and alcohol. While Fetal Alcohol Syndrome (FAS) is easiest to diagnose (http://www.supreme.state.or.us/casa/training/Fas/FASdiag.html), some of the drug effects (http://www.nida.nih.gov/NIDA_Notes/NVVo113N4/Prenatal.html) are not necessarily apparent immediately unless the child tested positive at birth. Drug effects are likely to manifest as low birth (http://www.adopt.com/topics/birth) weight, tremors, under developed neuro systems, and the inability to be soothed or sleep.

Initial Steps

- Demand (don’t just ask for) a complete medical history (http://www.adopt.com/topics/medical-history) and details about exposures: what substances were taken, for how long, whether or not the child can be or was born addicted, results of neonatal and subsequent testing, developmental aptitudes, etc.
- Seek independent medical evaluations [also for international adoptions (http://www.adopting.org/adoptions/international-adoption-medicine.html)]
- Learn about prenatal exposure, what they are and potential effects.
- Examine your abilities and work with adoption and/or counseling professionals if you need help assessing your own abilities and capabilities.

Before, During, and After Adoption

The best agencies will offer you access to, assistance with, or information about:

- adoption and/or medical subsidies
- continuing information about support or educational services
- health and child development follow-up, at least through preschool years
- early intervention services
- behavioral management
- special education services
- tutoring for academic underachievement
- assessment and intervention for neuropsychological problems
- counseling services for all family members
- support groups for parents
